

Testing Unit #81288 is designed exclusively for testing pressure dial gauges for Presto<sup>®</sup>, National, Maid of Honor, and Magic Seal pressure canners.

**KEY:** psi = pounds per square inch

\*test at the pressure that is required for your elevation

## RESULTS OF DIAL GAUGE TESTING:

- MASTER GAUGE reading is 6 psi\*, YOUR DIAL GAUGE reading is \_\_\_\_\_
- MASTER GAUGE reading is 11 psi\*, YOUR DIAL GAUGE reading is \_\_\_\_\_

## RECOMMENDATIONS:

- Your gauge reads accurately. *No changes are necessary.*
- Your gauge reads up to 2 pounds higher than the Master Gauge—you **must** add the difference to the required amount of pressure so food is not underprocessed.  
**Example:** If your dial gauge reads 12 psi when the Master Gauge reads 11 psi, you must add 1 pound to the required pressure, so process at 12 psi of pressure if the required pressure is 11 psi.
- Your gauge reads up to 2 pounds lower than the Master Gauge—you may subtract the difference from the required amount of pressure. However, this is not necessary because food is not being underprocessed.  
**Example:** If your dial gauge reads 10 psi when the Master Gauge reads 11 psi, you may subtract 1 pound from the required pressure, so process at 10 psi of pressure if the required pressure is 11 psi.
- Your gauge reads high or low by more than 2 pounds. *Replace gauge.*  
*Replacement gauges can generally be found at ACE or True Value hardware stores. Gauges can also be ordered from Presto. Call 1-800-877-0441 or go to [www.GoPresto.com](http://www.GoPresto.com) Parts & Service tab.*
